

# Lab - Interactivity

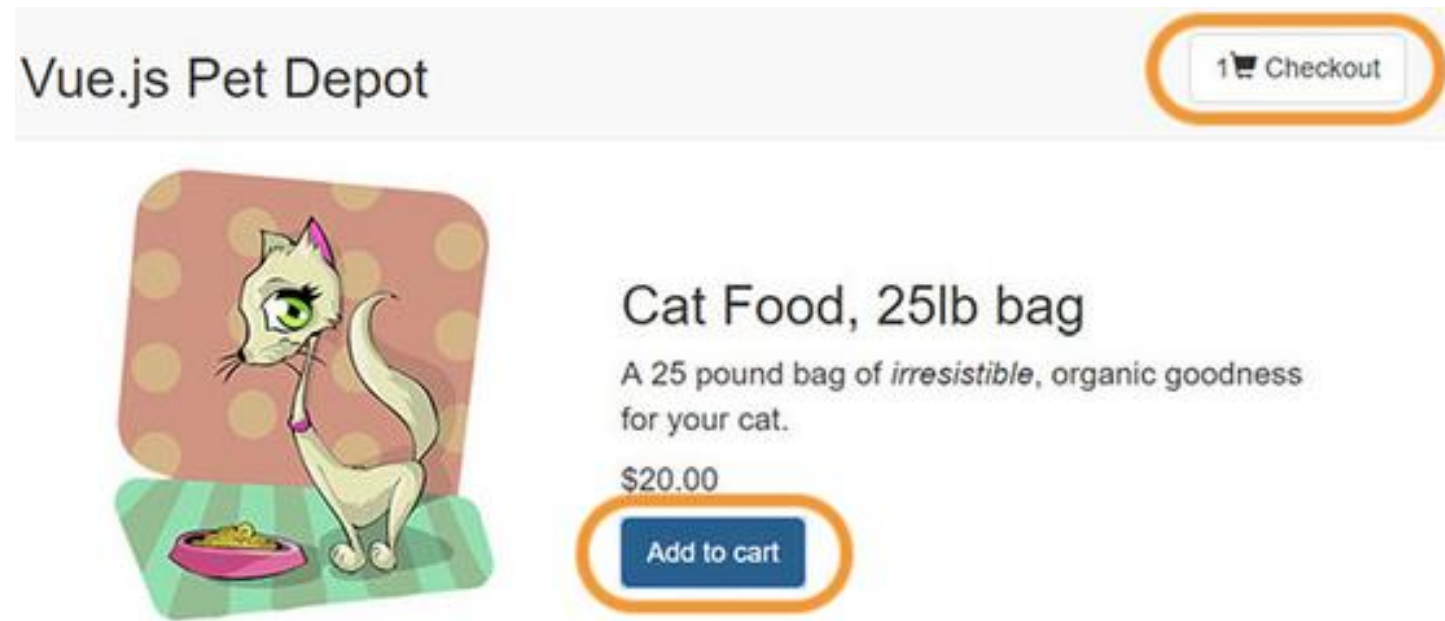

# Task: Implementing Interactions

- According to what we have seen in **our last Session**, we need to manage interactions for: the **inventory, cart, and switching between different areas (product list, checkout)**.

- **Expected Activities:**

- 1
  - to create a cart
  - to display the “Add to cart” Button
  - to manage the “on click” event
    - to add an item to the cart
- 2
  - to display and update the items count of the cart
  - to create the inventory
  - to limit the possibility to add items to cart only if there are still available items
- 3
  - to allow the user to switch from the product list to the checkout areas

# Questions?
